DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1, 5, 6 and 8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Mann et al '606.

Mann et al disclose monitoring for capture and increasing the atrial sensitivity level upon detecting a loss of capture. When loss of atrial capture is detected, a command is sent to the pacemaker 110, which causes the pacemaker 110 to produce an atrial stimulation pulse at an increased amplitude after a predetermined time. Subroutine block 630 of Fig. 9 determines the atrial sensitivity threshold of the pacemaker 110. The atrial sensitivity threshold may be adjusted at block 822 for sensing lower-amplitude atrial events. If lower-amplitude atrial events are not detected, activity block 819 disables the atrial sensitivity threshold test and restores all the changed parameters to their base values before the initialization of the test at block 811.

Regarding claim 5, atrial pacing pulses are inhibited if the lower-amplitude atrial events are identified as intrinsic, regardless of the possibility of atrial tachycardia.

Subroutine block 714 allows for increasing the PVARP to prevent the initiation of PMT during the performance of the atrial sensitivity threshold test.

Allowable Subject Matter

Claims 2, 3, 4 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
